# Company's Background

---

## About Us

PT Arsimekon Tatagraha was established by people with long experience in Mechanical, Electrical, Electronic Design Engineering and Construction. We started our services from providing the field of Building Services Engineering both to the private market in Indonesia and strive to provide the best solution in Mechanical Electrical Design Engineering works.

Main objective of the company is to help and provide customers in generating best Value Added Services for their companies. Through firm dedication from our personnel, we are confident to deliver the best solution and services to customers. It is our commitment to keep ourselves amongst the most reliable companies by means of service excellent, selling good design and installation with better services.

With our experience and our commitment to excellence, our customers shall see that we give priority to quality of our work, completed the work in time and provide them with their requirement for supplying equipment, design, construction and installation.

Accordingly, we are ready to take up the design project, engineering construction, installation works and maintenance completed with supplying high quality equipment, whether it is for residential, high rise building, hospital, airport, factory and telecommunication purpose.

# IT Product's 03

# Fiber Optic Cables, Data Center and Cabling Infrastructure

Design and IT implementation infrastructure architecture, Multi-Platform Integration Systems, Server and Storage Consolidation, Network design, back-up and recovery.

Enhancing your business agility calls for a stable yet flexible IT infrastructure that helps you react quickly to changing business conditions. This ultra-responsive adaptive infrastructure needs to be consistently available, widely scalable, readily manageable, and highly secure. Arsimekon Services takes a collaborative approach to helping you implement infrastructure solutions capable of cost-effectively supporting your business goals today and tomorrow. Whether you need to extend your existing network, integrate state-of-the-art mobile communications, tighten enterprise-wide security, or expand your storage capacity, our experienced professionals can shorten your time-to-results.

Fiber Optic Cables

Cabling Infrastructure

## ARSIMEKON

The Arsimekon solution is designed to optimize datacenter interconnectivity. And it helps you build a modular, scalable, simplified network infrastructure that supports voice/data convergence, online transactions, data replication, storage synchronization, and essential network services such as Domain Name Services (DNS), network and system management, and proxy, security and directory services.

Arsimekon network consolidation spans the full range of LAN and WAN solutions required to support the performance and availability requirements of data centers, voice, data, and storage systems and application environments.

Data Center

# Apps and Website developing

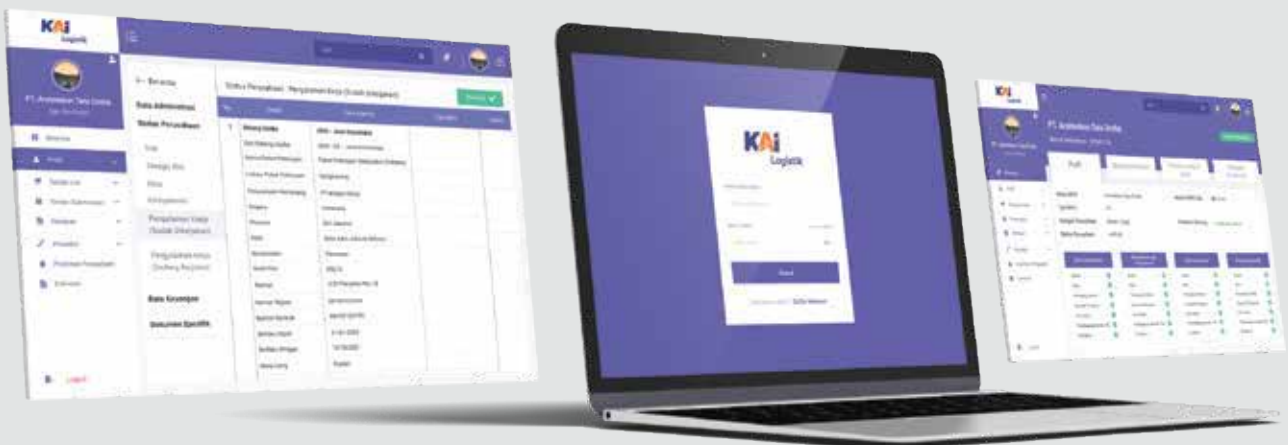

The rapid development of technology will bring a new world in front of all of us and everything will become digital,

We can help you create an App where you can interact adaptively with your customers and find out what your customers want through the App.
